## WORK EXPERIENCE

### Tag for Tags – Clothes Sales

June/2019 – Present

I started a my own business importing/selling Levi's clothes.

### Acura Sales executive

February/2019 – April/2019

Excellent customer service and prompt solution to concerns and  
problems. Knowledge of basic mechanics, appraisals of units used for  
their purchase and subsequent sale.

### Github Projects

I've developed some projects by myself and worked in a project of 6  
people team, we called the project “**CryptoCheck**” It was a simple  
idea, to give an investor some tool to see the current price for the top  
100 crypto coins and calculate how much an invest will cost for an  
specific crypto. We used an external API to get the value for the cryptos  
and we used JavaScript, Tailwind and SASS for the development.  
I worked in every part of the project, especially with JavaScript and  
Tailwind.

### Recent Project

My most recent project it's called “**Note Taker**” and I used Express to  
connect the frontEnd with the backEnd. I used middlewares and GET,  
POST and DELETE methods. Note taker let you write notes and save it in  
a JSON file that works as a data base, so, the user can create new  
notes and delete them from the data base. The app is already  
deployed through Heroku. **Link below!**
