ÁNGEL MONDRAGÓN

Full Stack Web Developer
JavaScript, NodeJS, Express, MySQL, HTML, CSS, GIT.

PROFILE

Technologies:
HTML/CSS/JavaScript/NodeJS
Express/Bootstrap/MySQL/
Sequelize/Handlebars/Bcrypt.
MVC Architecture Pattern/
API Management and Rest Services.

Experience developing several proyects with the technologies mentioned above.

I love working with API's and I can help you by creating or updating your API's rest services by implementing the use of try and catch. I also love working with the HTML semantics and CSS.

Search for personal improvement, job stability and opportunity for growth in the IT area.

Started a my own business importing/selling Levi's clothes.

Acura Sales executive

February/2019 – April/2019
Sale of new and used cars. Excellent customer service and prompt solution to concerns and problems. Knowledge of basic mechanics, appraisals of units used for their purchase and subsequent sale.

Github Project – NurseXpress

The last team project I've worked on is called **NurseXpress**. Our idea is based on providing nursing services to people who need it without leaving home, such as an injection, receiving serum etc. As well as generating freelance work for nurses. In this project work on both backEnd and FrontEnd. **In the backEnd I worked** mostly on **controllers, models and the views using handlebars**. **In the frontEnd I worked mostly in responsive web design. The app is still in development.**

Github Project – Developers-Fun-Blog

This is my most recent project. I used the **MVC architecture pattern** to develop this project. I used in the **backEnd**: **JavaScript**, **NodeJS**, **MySQL**, **Sequelize**, **Express**, **Express-Session**, **Bcrypt** and **Handlebars** to display all my views. I used in the **frontEnd: Bootstrap. Link to deployed Web:**
